

# TILLERS

VOLUME 4, DECEMBER 2003

---

## Contents

i Introduction

### ORIGINAL ARTICLES

- 1 Topographical location has little effect on *Andropogon gerardii* and *Sorghastrum nutans*  
**J. Anderson & S. Morse**
- 5 Soil pH influences the growth of *Phalaris arundinacea*  
**J. Bird & R. Carrillo**
- 11 Summer burning decreases density of *L. cuneata* but does not effect species diversity  
**J. Dingman, B. Kent & J. Petertil**
- 15 The effects of burning and mowing on soil moisture, soil pH, and percent Carbon and Nitrogen in soil and *Andropogon gerardii*  
**J. Edwards, M. Giles & C. Tindal**
- 21 Nitrate and phosphate levels positively affect the growth of algae species found in Perry Pond  
**S. Fried, B. Mackie & E. Nothwehr**
- 25 Effects of burning and burn season on the interaction between *Solidago altissima* and gallmaking insects  
**K. Hogan, E. Keller & E. Meade**
- 33 Fire, mowing and soil moisture levels have no significant effects on underground arthropod population and diversity  
**M. Pairis, J. Sundermann & H. Wang**
